

ASHISH PRATAP SINGH

Full Stack Web Developer | MERN Stack

Jaipur, Rajasthan, India | +91 88755 66521 | jamesashish332@gmail.com | linkedin.com/in/ashish-singh-28a491389 | github.com/AshishCodes-dev

PROFESSIONAL SUMMARY

Full Stack Web Developer with hands-on experience designing and shipping three production-style MERN and React/TypeScript applications, from an AI-powered music streaming platform to a ride-booking system with live fare and route calculation. Comfortable across the stack — REST API design, JWT-based authentication, database modelling, and responsive UI development. Currently seeking a Full Stack Developer Internship to contribute to real-world products while continuing to grow as an engineer.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, HTML5, CSS3

Frontend: React.js, Vite, Tailwind CSS, Framer Motion, Responsive Web Design

Backend: Node.js, Express.js, REST API Design, JWT Authentication, bcrypt

Databases: MongoDB, Mongoose, Supabase (PostgreSQL)

Tools & Platforms: Git, GitHub, Vercel, Postman, VS Code, npm

Other: Third-Party API Integration (YouTube Data API, OSRM, Nominatim, Geolocation API), Progressive Web Apps (PWA), MVC Architecture

Soft Skills: Problem-Solving, Team Collaboration, Adaptability, Clear Communication

PROJECTS

SONIQ — AI-Powered Music Streaming Platform

React 19, TypeScript, Vite, Tailwind CSS, Supabase (PostgreSQL), YouTube Data API, Vercel

- Engineered a full-stack streaming platform that plays any song in real time through the YouTube IFrame Player API, removing the need to host copyrighted audio files.
- Built an AI DJ feature that parses natural-language prompts (e.g., "gym energy english") to auto-generate and autoplay mood-based playlists.
- Implemented multi-provider authentication (Email, Phone OTP, Google) with Supabase Auth and designed the PostgreSQL schema for playlists, likes, queue, and listening history.
- Developed a Smart Radio recommendation feature using listening history and time-of-day context, plus an installable offline-capable PWA with a glassmorphism UI.

Uber Clone — Full-Stack Ride Booking Application

React 19, Node.js, Express 5, MongoDB, Mongoose, JWT, Leaflet, OSRM, Tailwind CSS

- Built a MERN ride-booking platform with independent rider and captain experiences, including JWT authentication and role-based protected routes (authUser, authCaptain, authAny).
- Integrated Nominatim and OSRM APIs for geocoding, live route mapping, distance/duration calculation, and dynamic fare estimation.
- Designed a complete ride lifecycle state machine (requested → accepted → started → completed) with REST-based captain assignment, OTP trip verification, and rider status polling.
- Applied secure auth practices — bcrypt password hashing and JWT token blacklisting on logout — across both rider and captain roles.

Personal Developer Portfolio — Full Stack Website

React 18, Vite, Node.js, Express, MongoDB, Mongoose, Nodemailer, Vercel

- Built and deployed a full-stack portfolio backed by a MongoDB content store with a complete CRUD REST API for managing project entries dynamically.
- Designed an interactive UI with a custom canvas-based animation, a magnetic cursor effect, and 3D-tilt project cards for an engaging user experience.
- Developed a dual-delivery contact form that saves submissions to MongoDB and triggers instant email alerts via Nodemailer, with a Web3Forms fallback for reliability.
- Deployed frontend and backend independently on Vercel with environment-based configuration.

EDUCATION

Bachelor of Computer Applications (BCA)

IPS College, Jaipur — Affiliated to Rajasthan University | 2023 – 2026 (Expected)
